

## NOTES:

- Push is activated when A, B, C, or D is activated.
   When using SimHub button matrixes, always connect push to the first row.
  Rotary Encoder is a half-step encoder.
  Reference code for this switch can be found at: https://github.com/darjusp/test
  M3x10 Standoff can be used to mount to the underside of a faceplate.
  COM is connected to GND for direct button presses, or can be connected to a dInput for button matrixes.
